

Make the most competitive & cost effective decisions at every stage of asset development

enersight™ is asset development planning and field modeling software that integrates the critical capabilities oil and gas companies need for high performance asset decisions. It combines development modeling, activity scheduling, analysis and forecasting to produce the industry's most accurate and defensible asset development plans.

Unified Planning System

Provide all multidisciplinary teams, including reservoir, marketing, production and finance, shared access to development plans, latest estimates, budgets and roll-up reports based on actual multi-source data, current operations and scheduling.

Flexible Development Modeling

Factor in more variables, dependencies and risks than any other system, to produce detailed planning models that are defensible, auditable and fully incorporate constraints and downtime.

Comprehensive Activity Scheduling

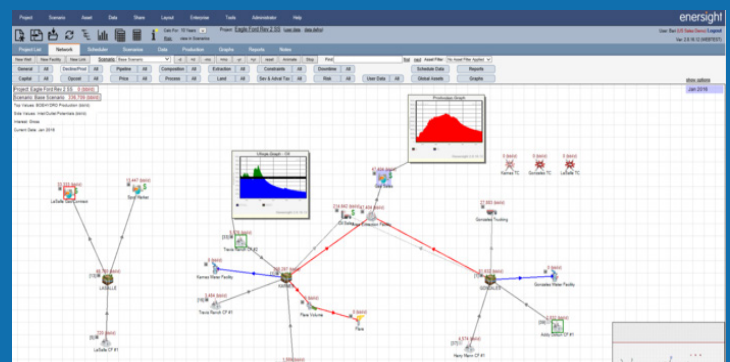

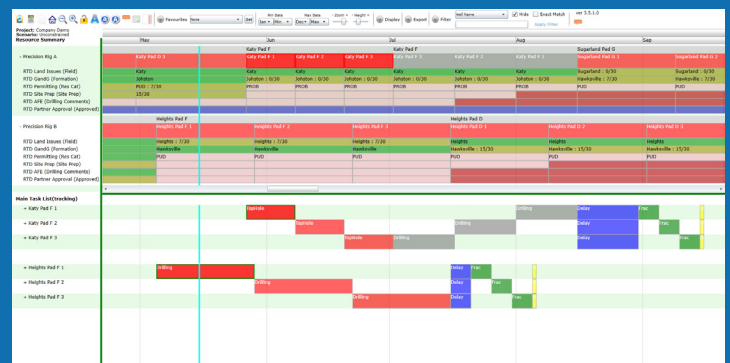

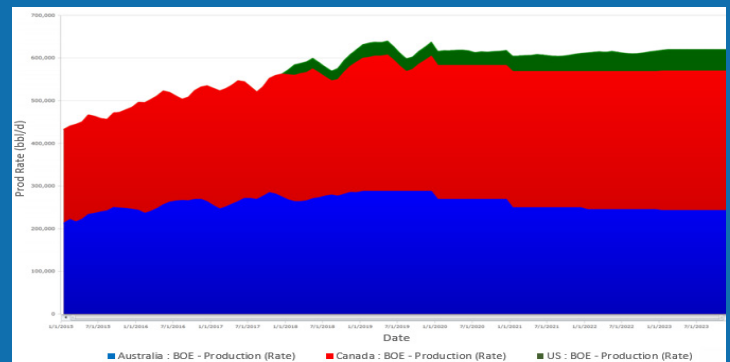

Equip your teams with one comprehensive schedule to build schedules, visualize current activities and easily make updates. See the effect of schedule changes on production start dates and volumes, and stay confident of production schedules and estimates.

Real Time Reporting

Easily generate the latest estimates, budgets and roll up reports, on demand, and share across teams and functions for clear visibility into all aspects of your development plan.

Cloud based Solution

Deploy enersight on premise, or leverage our cloud based technology for cross-company access, rapid analysis, secure data, zero install and a lower overall total cost of ownership (TCO).

SUCCESS STORY: COMPREHENSIVE, INTEGRATED ASSET DEVELOPMENT PLANNING

THE CHALLENGE

Our client needed a solution that could generate production and capital forecasts comprised of more than just decline parameters and activity costs. They knew that a true forecast is representative of the inclusion of an entire network of data inputs and assumptions, all interdependent on one another, and those assumptions can change more frequently than once a quarter.

CLIENT TESTIMONIAL

"We want to be able to make deliberate and carefully measured decisions, but I always say that you have to be able to measure it before you can manage it."

A NEW WAY FORWARD

They chose enersight™ as a critical means to verify the condition and potential of all assets to make collective, company-wide decisions. Today, as industry and market shifts occur, they can investigate the details of their forecasts at any level, from the field to the wellhead, to identify bottlenecks and economically unviable situations or strategic opportunities.

3esi • Enersight

3esi-Enersight is the world-leading provider of solutions for integrated strategy, planning and execution in upstream oil and gas.
