

Take ownership of your capital plan and know where you stand

esi.execute is capital management software for upstream oil and gas that combines all aspects of your current capital program into one integrated solution. With budgeting, forecasting, AFE/RTD, resource scheduling and more, no other tool brings together so many business processes into one centralized, collaborative solution.

Capital and Production Management

Capture all of your capital spending and other AFE-based spending in one place. Utilize project templates for standardized cost and production modeling. Forecast production and track project timing and activity.

Budgeting and Forecasting

Access and make updates to real-time evergreen scenarios without affecting snapshots preserved in time. Snapshot your budget and subsequent re-forecasts for stewardship.

Integration and Workflows

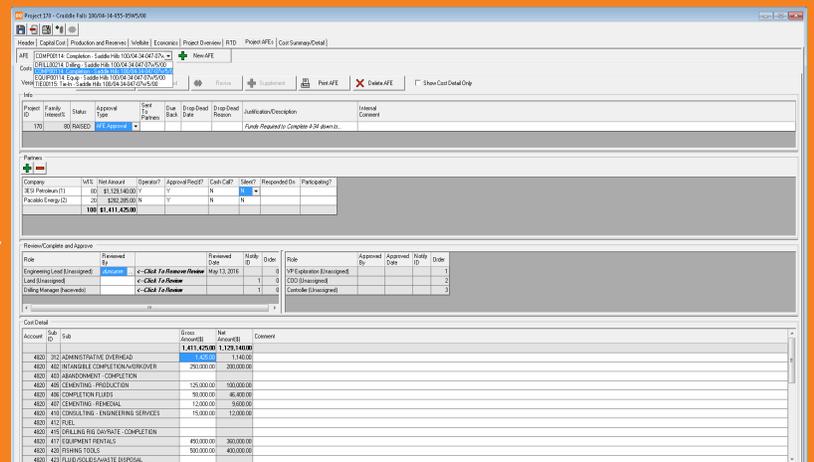

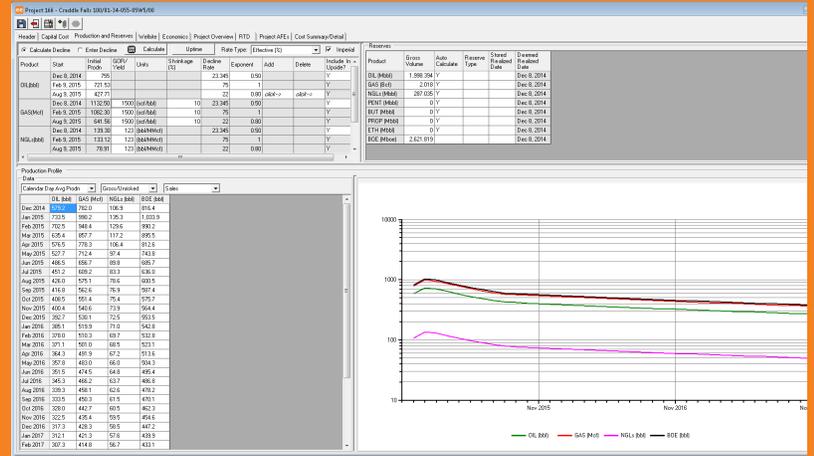

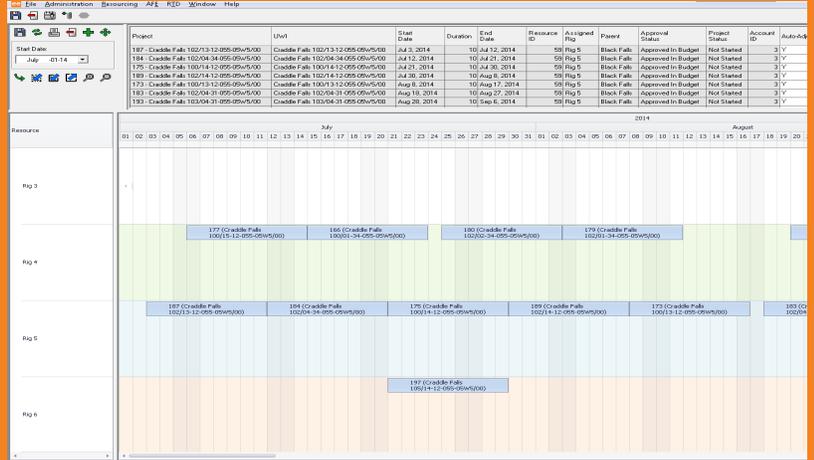

esi.execute integrates relevant data from your existing source systems where you can monitor and adjust plans as required. esi.execute utilizes a highly configurable role-based workflow engine, allowing you to build and progress your inventories to simplify the budgeting process.

Capital Accruals

Use data that already exists in esi.execute to determine your capital accruals. Use hard numbers to calculate net accrual amounts and avoid ballpark methods. Centralize the process or distribute to AFE owners or department representatives.

Scheduling

Schedule all activities using one click-and-drag Gantt chart. Manage resources and dependencies and customize bars to your specifications. Schedules are tied to your capital plan, ensuring capital and production timing are properly represented.

SUCCESS STORY: HOW ONE COMPANY BUILT RELIABLE, CONSISTENT ANNUAL BUDGETS

THE CHALLENGE

Our client was an intermediate upstream oil and gas company with a management team committed to aggressive, cost effective production growth. Their planners were increasingly dependent on multiple disparate sources for their planning data. At one point, it seemed like every team member had his or her own spreadsheet. These inconsistencies created difficulties conducting important planning activities such as reconciling expenditures with the budget, or understanding the sensitivities of changes to their drilling schedule, and the impact of those changes on their capital exposure and production profile.

CLIENT TESTIMONIAL

"I have no regrets about switching to esi.execute and would bring it with me to other companies in the future. It is an excellent tool that is constantly improving to provide a niche solution for the oil and gas industry."

A NEW WAY FORWARD

Today, they import their capital and production volumes into esi.execute on a monthly basis. From there they are able to tweak the schedule and forecast, to ensure they always deliver on their numbers.
